SKILLS

- Java
- Python
- Linux
- HTML
- CSS
- C++
- JavaScript
- Lisp
- Git
- Algorithm Design
- Technical Writing
- Data Analysis
- Interpersonal Comm.
- Patience
- Bilingual

EXPERIENCE

Algorithms and Coding Club

Member | Fall 2021 - Present

- Worked individually and with teams to strategize and solve complex system algorithms.
- Participated in numerous hackathons and programming competitions focused on algorithms and data structures.
- Achieved over 150 leetcode solutions, which in return made my problem-solving skills highly efficient.

Planet Fitness

Member Representative | Spring 2022 – Present

- Part-time team leader, organizing daily tasks and insuring the best results.
- Deal with over 500 members a day, communicating and fixing member concerns with ease.
- Keeping management apprised of member concerns by referring to policies, and procedures.
- Completing administrative tasks such as member file maintenance, and data entry of client records.

One MAX / MAX Gala

Videographer / Editor (**Volunteer**) | Summer 2020 – Fall 2021

- Responsible for leading a team of 10 in editing and publishing videos and slideshows to meet company standards.
- Managed multiple projects/tasks while meeting strict deadlines.
- Presented multiple project ideas to the board with confidence and ease.

Programming Teacher

Guest Teacher (**Volunteer**) | Spring 2020

- Taught a grade 8 class the basics of Java programming language.
- Planned, and organized a 2-hour lecture where students learned, variables, basic operations and standard out.

PROJECTS

Personal Website

HTML5 | CSS | JavaScript

- This website displays my portfolio needed for recruiters and or the public to easily acquire information and or contact me regarding this industry.
 - With my skills in frontend development, this website has been made to be responsive on all devices including PC, mobile and tablet.
 - A clean concept which is finished off with a user-friendly contact me section which instantly notifies me when someone has used it.
-

School Data System

Java

- The program keeps track of all students, employees, and admins.
 - With an object-oriented setup, certain users have limited security clearance which can only be accessed through a login that is stored safely in a separate database.
 - This design allows the user to add, remove and or change certain data depending on their security clearance.
-

Ecommerce User Interface

Java

- This program resembles amazon and with its object-oriented design, users can add, remove items from their shopping cart. Users can also proceed to checkout and complete a shipment.
- With the use of objects, arrays, lists, maps, recursion, and error checking, the use of is effectively displayed in this project.
